

FileMaker 18 Platform

Develop

New Import Dialog

Intuitively map source data to your applications with the newly designed import function.

New Calculation Functions

Prevent infinite calculations from locking your files with the new While and SetRecursion calculation functions.

Error Logging

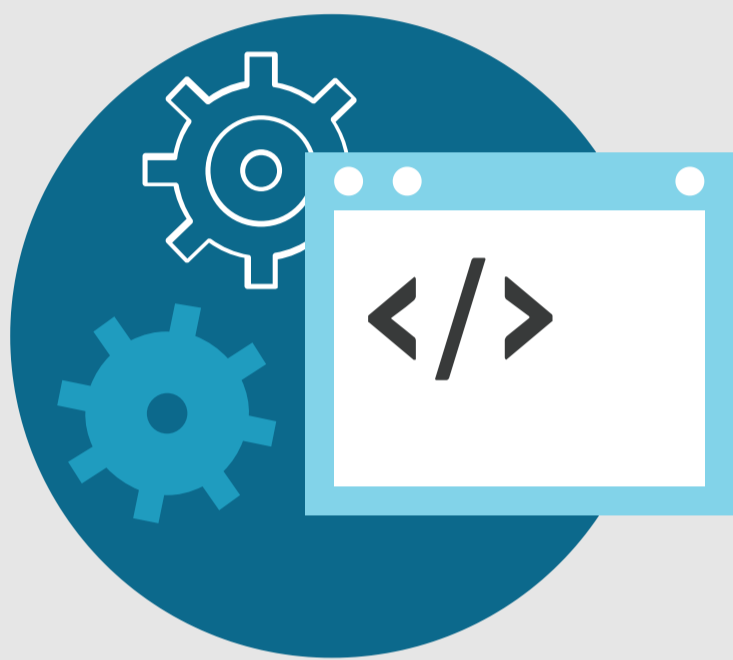

Manage and troubleshoot problems automatically within your applications.

File-Based Script Steps

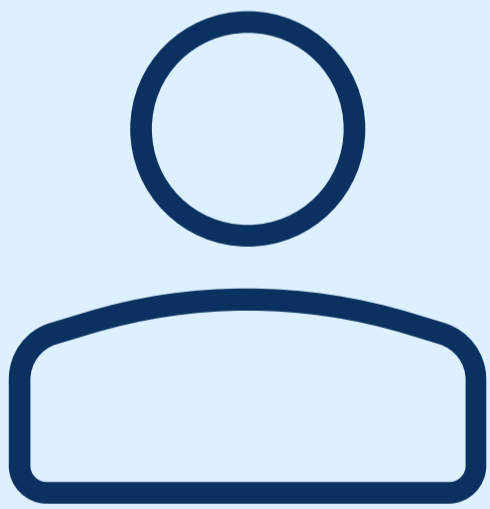

Read, write and manage data in external files for enhanced logging and export functions.

Save As XML

Easily compare changes and updates between different versions of your files.

Deploy

Security Features

Take advantage of UI enhancements, a new user privilege set, updates to file access and plug-in protection.

HTML eMails

Incorporate special layout options and images into your application workflows.

Obscure Features

Distinguish product version, specify app on startup and shift 10X arrow.
